The Admission Committee,

XXXX University,

Canada

I have always been passionate about mechanical engineering and have never allowed challenges to kill this passion. Having had to undergo brain surgery during 2013, the year I was to start my degree program, never made me lose hope in life. My strong-willed attitude made me get back to university and handle the practical engineering tasks even before attaining full recovery. Being a brain surgery survivor who had undergone immobility challenges, it made me map out and build devices to help the disabled. I was also able to come up with different university projects and company maintenance strategies that suited the specifications of various companies.

I pursued my undergraduate degree course in mechanical engineering at The University of the XXXX, where I graduated with Honors. After graduating from university, I have managed to gain a wide range of experience ranging from engineering, research, teaching, and information technology. My hard work and diligence have made me achieve various accreditations and certifications. Working as an engineer at different levels has equipped me with remarkable skills, which include the development of trend lines for improved maintenance, making plan designs, and also repair and maintenance of various equipment. Using my knowledge and expertise, I have managed to come up with several devices, which include the 3D printed assistive devices, for which I featured in a newspaper article dated 5th November 2018 of the Guardian and XXXX papers. I have worked as a research assistant and handled projects involving designing devices. I managed to design the XXXX, an Indian musical instrument, using Solid Works. I am a very determined and strong-willed person who ensures to accomplish everything I set out to do, and because of this, I will ensure that I excel in the master's program if awarded the chance

I have chosen to apply for the master's program in your institution because of the high reputation and worldly scholarly excellence that the institution possesses. The institution offers specialized studies in mechanical designs, 3D modelling, structural dynamics, and Computer-Aided Designs, of which I am passionate about. Furthermore, the institution has remarkable research facilities, which include the mechanical testing research laboratory, mechatronics, and research laboratories equipped with up to date facilities to facilitate research efficiently.

The program adequately serves my academic and research interests and will equip me with dynamic skills and expertise in the mechanical engineering field and further expand my knowledge, thus making me a sought-after professional engineer. I share similar research interests with Prof. XXXX in mechatronics and motion control systems alongside Prof. XXXX in CAD for modeling and simulation of medical equipment. I would greatly love to widen my knowledge in these areas as I make significant contributions to the department. Getting admitted to the institution will be a remarkable achievement for me as I have always wanted to add to my mechanical engineering body of knowledge and, most importantly, get to achieve this through studying at XXXX University. My short-term career goals include taking my engineering knowledge a notch higher and further improving my skills in design making, building, repair, and maintenance of equipment and machines. Achieving this will

make me a seasoned mechanical engineer and, therefore, will be able to tender my contributions towards nation building through the utilization of my expertise to come up with plans, devices, and equipment that automate processes. My long-term goals include further developing my career and gaining international recognition so I can render my services and impart skills to other engineers across the globe. Upon attaining the graduate degree, I will get back to the job market and work on new projects with the aid of my newly acquired skills. Thank you in advance for your kind consideration. It will be a great honor for me to pursue my passion at XXXX University. I hope that you will positively consider my application.

Sincerely,

Name XXXX
