**Personal Statement**

Ever since my childhood, computers were the bulk of my life. Currently, with each year passing, my curiosity has increased, and I perceive data XXXXX to be a long-term learning career. It commits an individual to continuous learning due to its highly demanding nature characterized by new challenges that emerge daily. I am especially interested in studying data XXXXX to create business models and further analyze vast datasets in large organizations to assess the product tastes of customers and evaluate potential sales. Therefore, I intend to explore my horizon and undertake a Master's of Science Degree in XXXXX.

Studying a Bachelor of Science in International Business & Management Information Systems as a major course at the University of XXX (UT) enabled me to determine the criticality of technology as the intrinsic aspect of business management and operations. My undertakings in the program have helped me to explore the application of technology in business to maintain a competitive edge. I gained technological skills in MS Word, Excel, PowerPoint, and Access. Besides these skills, I was able to add to my pocket skills in Java programming, SQL, Visio, Python, Nmap, and Wireshark. These skills enabled to broaden my horizon and give clear of Information Technology entails. I also undertook Cyberspace Security as a minor course and gave me the basics of how to technologically protect the servers of an organization from the interference of other people.

My work experience has been based on internship modules. During my summer internship at The XXXX as an Information Technologist, I gained experience in troubleshooting the station's hardware, helped in hardware applications installations, and their upgrades. I also got proficiency in the installation and configuration of telephone, access control, and digital video observation. Later on, I undertook another internship opportunity at the XXXX as a

business developer, where I learned how to develop and navigate through business plans. In XXXX Health Care solution, I worked as a Sales Support Associate's, where I was engaged in conducting transactions and processing accurately and promptly. My work experiences gave an insight into the practicality of the teachings learned in the classroom. I am currently working at XXXXX as a Solution Associate, and with new skills being learned daily,

I am quite adamant about undertaking a Master of Science in XXXXX to broaden my career horizons and achieve the long-life desired goals of business XXXXX. Thus, I wish to enroll in the program at XXXXX University (XXXXX College of Business) because of high-quality programs offered by the institution. I choose XXXXX University because I believe it is the best University offering this ideal Master's program. The faculty in the school is well versed and displays exemplary skills with rigorous quality controls in imparting the knowledge to the students; hence, they get a high-quality education.

Enrollment in this program will allow me to attain my short-term goals of gaining more in-depth knowledge of the technological and analytical field, which will be an opening for me to undertake a Ph.D. program later. My long-term goals are to be a proficient data analytic by demonstrating high levels of technical understanding and becoming a change agent to many organizations. Furthermore, the program will have a great impact on my career advancement to even work in higher positions where I can sufficiently handle the analysis of big data and deduct useful meanings to promote both the organization's and consumers' welfare.

I look forward to pursuing the program at XXXXX University through your positive consideration. Thank you.
